Reduce Waste

Waste reduction strategies are important for businesses and homes to minimise how much rubbish you produce. Introducing a set of techniques to reduce waste helps ensure as little refuse as possible goes to landfill.

Save Energy

Helping to preserve this precious resource for future generations can help us make significant changes in our lives through simple measures.

1. Switch off lights and electrical appliances when not using them

To save the most energy, switch off the power point rather than leave appliances on standby.

Switch off your computer and equipment such as printers or Wi-Fi routers overnight or when you're away. Most computers have energy-saving settings that will turn the computer and screen off after a period of inactivity.

Conserve Water

If we all do our part in saving precious water supplies, we can make a huge difference for the environment. (*Try pressing the image for a while?*)

In Bathroom

To kick off, turn the tap off while brushing your teeth since a running tap can waste more than 6 litres of water a minute! Other than that, get a cistern displacement device to save up to 5,000 litres of water every year. They are free from most water companies. Moreover, shower instead of bathe. An average bath uses around 80 litres of water, but a shower typically uses between 6 and 45 litres.

Reduce Waste

Waste reduction strategies are important for businesses and homes to minimise how much rubbish you produce. Introducing a set of techniques to reduce waste helps ensure as little refuse as possible goes to landfill.

Embrace the 3Rs

These principles allow us to create a roadmap for change, conserve resources and protect our planet for future generations. [Try to click me!!](#)

Switch to Reusable Items

There are plenty of everyday items. Some you might not have even considered. [Try to click me!!](#)

Compost Food Scraps

Ideally, we would eat all the food we buy. If we can't eat it, or give it away, or feed it to our chickens, then wasted food belongs in a compost heap of some sort.

Purchase Second-Hand

Donating unwanted items is another easy way to reduce your own waste. Plus, it's normally significantly cheaper to buy second-hand.

Only Buy What You Need

The easiest way to reduce waste is to avoid buying extra stuff you won't use in the first place.

Embrace 3Rs

These principles allow us to create a roadmap for change, conserve resources and protect our planet for future generations.

Finding new ways to use things that otherwise would have been thrown out

Cutting back on the amount of trash we generate

Turning something old and useless into something new and useful

[Home](#)

[Eco Tips](#)

[Products](#)

[Community](#)

Reuse

Taking old or unwanted items you might otherwise throw away and finding a new use for them.
There are all sorts of ways you can reuse items to help reduce your trash footprint:

Home

1. Clean out your closet

Maybe your size has changed. Maybe your tastes have changed. Instead of throwing away clothes you don't want anymore, give them to someone who will want them.

Eco Tips

- If you have a box of toddler clothes, for example, and your “baby” is now in grade school, give the clothes to a friend with a young child.
- You can also donate your clothes to any number of charitable organizations.

Products

They will give your clothes a good home and you get a nice tax deduction.

Community

2. Find a new use for an old item

When it's time to throw something out, think about other possible ways to use it.

- Glass jars, for example, can become storage for your crafting area or shop.
- Old bath towels can be cut up and used as wash rags.
- Old bath towels can be cut up and used as wash rags.
- Make a woven basket or tray out of old magazines.
- The toothbrush you're replacing is the perfect scrub brush for hard-to-reach areas.

3. Have a garage sale

You know that dining room set, exercise equipment, knick-knacks, blender and other things around the house you no longer use?

There's someone out there who would love to have them. A garage sale is a great way to clean out your space and help reuse all the items you don't want. You can make a little money too. And when the sale is done, box up anything that didn't sell and donate what's left to a local charity. Many of them will come to your house to make a pickup.

Reduce

[Home](#)

Making less waste to begin with means there's less waste to clean up.
Here are some easy ways you can reduce the amount of waste you make:

1. Pack your lunch in a lunchbox

[Eco Tips](#)

Paper and plastic bags create a huge amount of waste since they need to take hundreds of years to decompose.

[Products](#)

- Try a durable lunchbox or reusable lunch bag instead.

2. Bring reusable bags to the grocery store

[Community](#)

Most stores sell canvas or durable plastic shopping bags that can be used again and again. Some grocery stores even give you a little money off at the checkstand when you bring your own bags.

3. Say no to bottled water

- Instead of buying bottled water, use a reusable water bottle.

4. Watch what you buy

When you're in the supermarket, pay attention to the packaging.
Can the container be cleaned out and used for something else?

And when comparing two similar products, if one has less packaging, consider making that your selection.

Recycle

Changing discarded materials into new products in order to avoid using more virgin resources.

[Home](#)

Corrugated cardboard, milk jug style containers, newspaper and inserts, and tin and aluminium cans can all go in your Rogue Disposal & Recycling red-lid cart to be recycled.

[Eco Tips](#)

But what happens to those items down the road?

[Products](#)

[Community](#)

- Corrugated cardboard is recycled into paper bags, paperboard (like boxes for detergent, cereal, tissue and shoes), new cardboard and even the squiggly middle part of corrugated cardboard.
- The plastic in milk jug style containers is turned into plastic lumber for decking, buckets, Frisbees, storage tubs, new plastic bottles and stadium seats!
- Newspaper is one of the easiest-to-recycle and most-recycled materials. Yesterday's news gets turned into egg cartons, building insulation, paper plates, kitty litter, construction paper, phone books, sheetrock and new newspaper.
- When you put tin and aluminium cans in the recycling cart, they are taken to a plant where they can be reprocessed into a variety of new products. Keeping them out of the landfill and continuing their useful life. Old cans might become new cans, or they may be changed into things like bike frames or asphalt roadway.

Switch to Reusable Items

[Home](#)

There are plenty of everyday items. Some you might not have even considered.

1. Reusable Cleaning Clothes

[Eco Tips](#)

Swap: Paper towels

For: Reusable cleaning cloths or sponges

Every time you use a paper towel, it's one more piece of waste added to the landfill. Instead, opt for reusable cleaning clothes or sponges. These are machine washable, long-lasting, and effective for cleaning messes around the house

[Products](#)

Tip: Keep a set of reusable cleaning cloths in your kitchen, and use them for cleaning spills, wiping down counters and drying dishes.

[Community](#)

2. Reusable Food Storage Bags and Wraps

Swap: Plastic sandwich bags and cling film

For: Beeswax wraps or silicone food storage bags

Plastic sandwich bags and cling film are often used for packing snacks and leftovers, but there are much more sustainable options. Beeswax wraps are perfect for wrapping up sandwiches, fruits, and other snacks. They are washable and reusable, making them an eco-friendly alternative to plastic wrap. Silicone food storage bags are another great option for storing food, as they are durable, reusable, and safe to use in the freezer.

Tips: Use beeswax wraps to cover your lunch box or tiffin to keep food fresh without resorting to single-use plastic bags.

How to Get Started with Reusable Swaps

1.

Take it Slow: Making the switch doesn't need to happen all at once. Start by swapping out one or two disposable items for reusable alternatives and gradually work your way up.

2.

Invest in Quality: Reusable items are often more durable than their disposable counterparts, so it's worth investing in high-quality products that will last.

3.

Be Prepared: Keep reusable items like your lunch box, water bottle, and shopping bags with you so you're always ready to make sustainable choices when you're out and about.

Conclusion

By doing this, we can replace disposable versions and help cut down on waste without sacrificing convenience. From kitchen essentials to personal care products, the right reusables don't just help the environment, they often save money and make life easier in the long run.

Daily Life

Being green is more than just buying "eco".
It is an unshakable commitment to a sustainable lifestyle.

Transportation

Green transportation refers to environmentally friendly modes of travel methods that lower emissions, conserve energy, and reduce the environmental footprint of transporting people and goods.

General Habits

Simple, everyday eco-friendly habits can make the air, water, land, animals, and all elements of the biosphere healthier! This would, in turn, drastically affect our health and lifestyle.

Cycling – Some cities have encouraged people to use bikes for short trips, which not only cuts down emissions but also promotes a healthy lifestyle.

Electric Vehicles – Electric Vehicles (EVs) run on electricity, reducing reliance on fossil fuels and producing zero tailpipe emissions.

Public – These vehicles significantly reduce pollution and offer a more sustainable solution for mass transportation.

Walking – Adopting pedestrian-friendly sidewalks and dedicated zones for non-motorized transport is crucial for promoting walking as a mode of transportation.

General Habits

Here are a few everyday eco-friendly habits that are very easy to incorporate into your day-to-day tasks but can dramatically change the fate of the human race and the environment we live in:

Prevent Food Waste

Most people don't realize how much food they throw away every day – from uneaten leftovers to spoiled produce to parts of fruits and vegetables that could be eaten or repurposed. Preventing food from going to waste is one of the easiest and most powerful actions you can take to save money and lower your environmental footprint by reducing greenhouse gas emissions and conserving natural resources.

Educate Others

Environmental education (EE) connects us to the world around us, teaching us about both natural and built environments. EE raises awareness of issues impacting the environment upon which we all depend, as well as actions we can take to improve and sustain it. Whether we bring nature into the classroom, take students outside to learn, or find impromptu teachable moments on a nature walk with our families, EE has many benefits for youth, educators, schools, and communities.

As the realities of climate change become more obvious each day, being thoughtful about how we consume is increasingly important. Today's consumers expect brands to offer more eco-friendly products.

SOLAR ENERGY DEVICES

Solar Panels

[Description](#)

[Other Brands](#)

When sunlight hits a solar panel, the light energy is converted into electricity.

This process is known as the photovoltaic (PV) effect, which is why solar panels are also called photovoltaic panels, PV panels or PV modules.

Solar panels respond to both direct sunlight coming straight from the sun and diffuse sunlight reflected from particles in clouds and the atmosphere. Solar panels are usually able to generate some electricity even on a cloudy day. However, most electricity is produced on clear days when direct sunlight hits the panels.

Prevent Food Waste

Most people don't realize how much food they throw away every day — from uneaten leftovers to spoiled produce to parts of fruits and vegetables that could be eaten or repurposed. Preventing food from going to waste is one of the easiest and most powerful actions you can take to save money and lower your environmental footprint by reducing greenhouse gas emissions and conserving natural resources.

[Learn More >](#)

Educate Others

Environmental education (EE) connects us to the world around us, teaching us about both natural and built environments. EE raises awareness of issues impacting the environment upon which we all depend, as well as actions we can take to improve and sustain it. Whether we bring nature into the classroom, take students outside to learn, or find impromptu teachable moments on a nature walk with our families, EE has many benefits for youth, educators, schools, and communities.

Products

As the realities of climate change become more obvious each day, being thoughtful about how we consume is increasingly important. Today's consumers expect brands to offer more eco-friendly products.

SOLAR ENERGY DEVICES

Solar Panels

[Description](#) [Other Brands](#)

When sunlight hits a solar panel, the light energy is converted into electricity.

This process is known as the photovoltaic (PV) effect, which is why solar panels are also called photovoltaic panels, PV panels or PV modules.

Solar panels respond to both direct sunlight coming straight from the sun and diffuse sunlight reflected from particles in clouds and the atmosphere. Solar panels are usually able to generate some electricity even on a cloudy day. However, most electricity is produced on clear days when direct sunlight hits the panels.

REUSABLE STRAWS

Bamboo Straws

[Description](#) [Other Brands](#)

Ecobags provide a clean, safe, and eco-friendly alternative.

With Ecobags, the humble paper bag has been redesigned into a tough, reusable tote that offers a potential cottage industry for poor city-dwellers. Ecobags employ an innovative design that recycles simple materials and can be cheaply and easily assembled en masse.

The durable and reusable bags can be mass-produced by self-help groups in common facility centers, and then sold to the public.

Save Energy

Helping to preserve this precious resource for future generations can help us make significant changes in our lives through simple measures.

1. Switch off lights and electrical appliances when not using them ▾

To save the most energy, switch off the power point rather than leave appliances on standby.

Switch off your computer and equipment such as printers or Wi-Fi routers overnight or when you're away. Most computers have energy-saving settings that will turn the computer and screen off after a period of inactivity.

2. Minimising hot water use ▾

3. Choosing efficient appliances ▾

4. Use energy star appliances and equipment ▾

Conserve Water

If we all do our part in saving precious water supplies,
we can make a huge difference for the environment.

(Try pressing the image for a while?)

In Bathroom

To kick off, turn the tap off while brushing your teeth
since a running tap can waste more than 6 litres of
water a minute! Other than that, get a cistern
displacement device to save up to 5,000 litres of water
every year. They are free from most water companies.
Moreover, shower instead of bathe. An average bath
uses around 80 litres of water, but a shower typically
uses between 6 and 45 litres.

Reduce Waste

Waste reduction strategies are important for businesses and homes to minimise how much rubbish you produce. Introducing a set of techniques to reduce waste helps ensure as little refuse as possible goes to landfill.

Embrace the 3Rs

These principles allow us to create a roadmap for change, conserve resources and protect our planet for future generations. [Try to click me!!](#)

Switch to Reusable Items

There are plenty of everyday items. Some you might not have even considered. [Try to click me!!](#)

Compost Food Scraps

Ideally, we would eat all the food we buy. If we can't eat it, or give it away, or feed it to our chickens, then wasted food belongs in a compost heap of some sort.

Purchase Second-Hand

Donating unwanted items is another easy way to reduce your own waste. Plus, it's normally significantly cheaper to buy second-hand.

Only Buy What You Need

The easiest way to reduce waste is to avoid buying extra stuff you won't use in the first place.

Reuse

Taking old or unwanted items you might otherwise throw away and finding a new use for them. There are all sorts of ways you can reuse items to help reduce your trash footprint.

1. Clean out your closet

Maybe your size has changed. Maybe your tastes have changed. Instead of throwing away clothes you don't want anymore, give them to someone who will want them.

- If you have a box of toddler clothes, for example, and your "baby" is now in grade school, give the clothes to a friend with a young child.
- You can also donate your clothes to any number of charitable organizations.

They will give your clothes a good home and you get a nice tax deduction.

2. Find a new use for an old item

When it's time to throw something out, think about other possible ways to use it.

- Glass jars, for example, can become storage for your crafting area or shop.
- Old bath towels can be cut up and used as wash rags.
- Old bath towels can be cut up and used as wash rags.
- Make a woven basket or tray out of old magazines.
- The toothbrush you're replacing is the perfect scrub brush for hard-to-reach areas.

3. Have a garage sale

You know that dining room set, exercise equipment, knick-knacks, blender and other things around the house you no longer use?

There's someone out there who would love to have them. A garage sale is a great way to clean out your space and help reuse all the items you don't want. You can make a little money too. And when the sale is done, box up anything that didn't sell and donate what's left to a local charity. Many of them will come to your house to make a pickup.

Daily Life

Being green is more than just buying "eco". It is an unshakable commitment to a sustainable lifestyle.

Transportation

Green transportation refers to environmentally friendly modes of travel methods that lower emissions, conserve energy, and reduce the environmental footprint of transporting people and goods.

General Habits

Simple, everyday eco-friendly habits can make the air, water, land, animals, and all elements of the biosphere healthier! This would, in turn, drastically affect our health and lifestyle.

Transportation

We are encouraged to reduce driving to help minimize our carbon footprint and protect the environment. (*There are four interesting things in the image!*)

Public - These vehicles significantly reduce pollution and offer a more sustainable solution for mass transportation.

Cycling - Some cities have encouraged people to use bikes for short trips, which not only cuts down emissions but also promotes a healthy lifestyle.

Walking - Adopting pedestrian-friendly sidewalks and dedicated zones for non-motorized transport is crucial for promoting walking as a mode of transportation.

Electric Vehicles - Electric Vehicles (EVs) run on electricity, reducing reliance on fossil fuels and producing zero tailpipe emissions.
